

Data Collection and Preprocessing Phase

Date	5 th July 2024
Team ID	739719
Project Title	Garment Workers Productivity Predictions
Maximum Marks	6 Marks

Preprocessing Template

The images will be preprocessed by Data collection, Handling missing values, Normalization, Data aggregation, Data splitting, Visualization, Data storage, Documentation. This template provides a concise yet complete approach to preprocessing a dataset in preparation for machine learning.

Section	Description
Project Overview	Brief description of the project and its goals.
Data Collection	List of data sources and Types of data collected
Handling Missing Values	Techniques used (e.g., imputation, removal).
Normalization:	Procedures for scaling data
Data Aggregation:	Summarizing data to higher-level formats.
Data Splitting	Proportion of data split and Strategy used for cross-validation

Visualization Tools:	Tools and libraries used (e.g., Matplotlib, Seaborn).																																																																																											
Data Storage	Systems used for storing preprocessed data (e.g., SQL, NoSQL, cloud storage).																																																																																											
Documentation	Detailed documentation of all preprocessing steps for reproducibility.and A comprehensive data dictionary describing all variables and their transformations																																																																																											
Data Preprocessing Code Screenshots																																																																																												
Loading Data	<pre>df = pd.read_csv(r'C:\Users\sraa\Downloads\miniProject\garments_worker_productivity.csv') df.head()</pre>
